

# MANAGING WORK IN HOT CONDITIONS

Everything that is reasonably practicable to eliminate or minimize the risks associated with working in the heat should be done. This may include:

- Rescheduling tasks to cooler periods of the day (or year).
- Waiting for hot conditions to pass.
- Re-organize outdoor work so that workers carry out alternative tasks, rotate work or work in the shade, particularly at around 11.00 am–3.00 pm when heat and solar ultraviolet radiation is the most intense.
